

Aragen's Cell Line Development Solutions for Biologics: CHO Cell Line Platforms

CLD Process Flow with Timeline

CHO CLD Platforms

- CHO DG44, CHO GS, CHOZN, SP 2/0
- Our CHO DG44 platform achieves >4g/L in 5 months, while CHO GS reaches up to 8g/L, with no royalties or milestone payments. Ideal for difficult proteins, NBEs, and animal health.
- Over 100 CLD programs Pre-IND/GMP
- Over 14 in clinical development and 3+ commercial production.

Key Attributes

- RapTr2022 with Aragen offers choice of CLD platforms
- Royalty-free CHO DG44 best suited for biosimilar development.
- Royalty free, accelerated timeline for DG44 and CHO GS (16 weeks from transfection to RCB)
- Transfection to single cell clone evaluation in 16 weeks with Aragen's optimized process
- Our CLD platform uses a chemically defined serum free medium and proof of clonality to support IND filing
- Strong Analytical capabilities – early engagement to establish quality and select right clones to advance

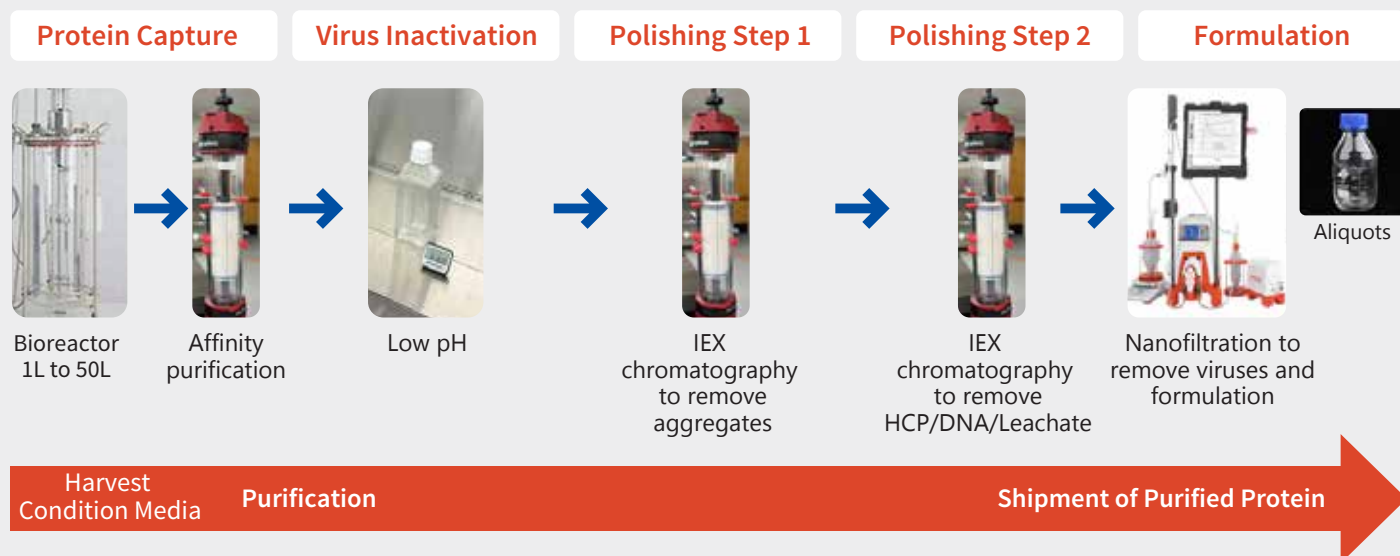

Aragen's Process Development Solutions for Biologics CHO CLD Platforms

Aragen offers efficient upstream and downstream process development

- We use commercially available, nonproprietary media and feed for screening studies, allowing seamless transfer to any CDMO
- Media and feed screening in shake flasks
- Process parameter screening and optimization in AMBR250®
- Process consistency and scalability happens in 1L, 5L & 10L bioreactor

Downstream Process Development

Key Attributes

- Ambr250® platform for upstream process development- synergies to reduce time to IND
- Fully automated AMBR250® 24 units, integrated to NOVA Flex-2 & Vi-Cell
- Multifactorial DOE to screen process parameters like- pH, DO, Temp, agitation etc
- Process parameter optimization and identifying best operative parameters
- History of generating biosimilar cell lines- now in market
